

MATHEUS MOREIRA PESSOA

SOFTWARE ENGINEER | BACK-END .NET | ARCHITECTURE & AWS

Goiânia, GO, Brazil | +55 62 98582-1680 | matheus.pessoa.dev@gmail.com

GitHub | LinkedIn | Portfolio

PROFESSIONAL PROFILE

Senior Systems Analyst experienced in architecture, development and maintenance of C#/.NET systems and APIs. Work spans requirements gathering and layered solution design with DDD through testing, deployment, version control and production support.

Experience with Oracle and SQL Server, with current use of Supabase (PostgreSQL); knowledge of NoSQL databases, stored procedures, optimized queries and read routing. Design of data and API architectures according to system requirements, balancing performance, scalability, security and efficient resource use. Hands-on experience with Docker, Git/GitHub, CI/CD, Kubernetes and AWS EC2/ECS/S3. Collaboration with business stakeholders and technical teams to deliver reliable, scalable solutions.

TECHNICAL SKILLS

Back-end: C#, .NET, ASP.NET Core, Web API / RESTful, Entity Framework Core, Dapper, object-oriented programming and DDD.

Front-end: Angular components, services, routing, forms and HttpClient; React Native components, props/state, hooks and navigation; JavaScript/TypeScript and HTML/CSS. Interface modeling, MVC where applicable, componentization and code reuse.

Integrations: REST, SOAP, Microsoft Graph API, SharePoint REST and SAP.

Data & cloud: Oracle, SQL Server, Supabase (PostgreSQL), NoSQL, PL/SQL, AWS EC2/ECS/S3, Docker and Kubernetes.

Quality: xUnit, NUnit, Serilog, Application Insights, Git/GitHub and CI/CD with Jenkins / GitHub Actions.

PROFESSIONAL EXPERIENCE

Argo Inteligência Digital | Senior Systems Analyst

Jun 2026 - present

Development and maintenance of solutions for Goiânia City Hall using Oracle, Angular, C#/.NET 10, microservices, Docker and Kubernetes. Implementation of business rules, integrations and validation, incident analysis and evolution of production applications.

Óticas Brasil | Software Engineer | Contractor

Nov 2025 - Jun 2026

Development of a .NET application with DDD architecture and an MVC front-end in Blazor, Docker and Kubernetes, integrated with store Oracle databases. Communication services, consolidated queries and data-access optimization; Oracle-SQL Server integration for Slim4 and support for workloads on AWS EC2.

PROFESSIONAL EXPERIENCE - CONTINUED

TCS Brasil | Mid-level Systems Analyst

Jan 2024 - Jun 2026

Development of .NET Framework and .NET Core/.NET 6+ solutions, Blazor, Docker, Kubernetes, Git, CI/CD and code reviews. Contributions to project architecture, Oracle integration, stored procedures and query optimization. Work with Microsoft Graph API, SharePoint REST and AWS S3.

Senac Goiás | IT Systems Analyst

Jul 2022 - Feb 2024

Development and evolution of Copa Sesc for tournament and payment management. C#/.NET features and APIs with a Blazor interface, including registrations, forms and validation for events and social assistance services. Support for application execution and deployment on AWS using Docker and Kubernetes. Error handling, logging and performance improvements for high-usage periods. Data modeling and migrations, collaboration with infrastructure, DBA and DevOps teams on CI/CD and production support. JWT authentication and authorization with public/private keys and Microsoft service integrations.

State of Goiás | SEDI / Cast Group | Public-sector systems

2020 - 2022

Maintenance and evolution of C#/.NET and OutSystems public-sector systems, implementing procurement business rules. Work on GOMAP using DDD, NHibernate and Oracle. Data modeling and database documentation with Oracle Designer and the data dictionary. Collaboration in Scrum, planning, daily meetings and code reviews held on Wednesdays and Thursdays.

RELEVANT PROJECT

Rental management system | Personal project

Web application for rental management, with customer, vehicle, company, contract and maintenance modules. Built with ASP.NET Core and .NET 10, using a layered architecture based on DDD principles and separating business rules, application and infrastructure.

REST API and Blazor interface; persistence with Entity Framework Core and PostgreSQL hosted on Supabase. JWT authentication, SEFAZ API integration, automated tests, LINQ queries and lambda expressions, with data-access optimization. Packaged with Docker and deployed on AWS EC2/ECS, with S3 storage.
